

## TUBE-LUBE® 346 35300 series

This product is specifically designed for those extra heavy-duty cable installations and although the TUBE-LUBE® 326 is an all purpose lubricant and quite suitable for heavy cables, there are those that will insist on using a more traditional type of gel type lubricant.

The TUBE-LUBE® 346 fits that bill.

Available only in 5 gallon pails, TUBE-LUBE® 346 is compatible with all cable jackets and all types of ducting.

The product is a heavy duty gel that should be applied to the cable as it enters the ducting and will stay on the cable throughout the pull.

This product can be used in temperatures between 14 and 120 degrees F.

Part No.	Description	Weight
35300-050	5 Gallon Container	42 lbs.
